Overnight Guest Registration

11. Impersonation and Troubleshooting

1. Getting Started

Quarry is the parking management platform for Moravian University. It handles permits, the parking lottery, citations, lot management, campus alerts, and financial reporting. You access it at **parking.moravian.edu** using your Moravian Okta credentials.

Signing In

Navigate to parking.moravian.edu. You will be redirected to Moravian's Okta sign-in page. Enter your Moravian email and password. If you are a member of a Quarry admin or staff Okta group, you will see the admin dashboard. If not, you will see the student portal.

***Note:** If you sign in and see the student view instead of the admin dashboard, contact IT to have your account added to the appropriate Okta group.*

The Admin Dashboard

The dashboard is your landing page. It provides an at-a-glance view of parking operations. Use the period selector (Today, Last 7 Days, This Month) to scope the statistics.

- **Needs Action** -- the number of pending appeals and escalated tickets requiring your attention.
- **Issued** -- tickets issued in the selected period, compared to the daily average.
- **Revenue** -- collected and pending revenue for the period.
- **Resolution Rate** -- percentage of tickets that have been resolved (paid, voided, or appeal approved).
- **Action Items** -- a list of specific items needing attention, color-coded by urgency (red = overdue, yellow = needs review, green = new).
- **Activity Feed** -- a chronological log of recent system events.
- **7-Day Trend** -- a bar chart of daily ticket issuance over the past week.

The dashboard auto-refreshes every 30 seconds.

Roles: Operator vs. Admin

Quarry has two staff roles. Your role determines which features you can access. Both roles see the admin dashboard and navigation bar, but certain sections are restricted to admins.

Operators can access:

- Dashboard
- Permits (create, edit, revoke, export)
- Visitor Presets and Guest Registrations
- RA Roster and ABSN Discounts
- Vouchers
- Ticket search and viewing
- Mail guest citation notices
- Lots and Calendar
- BirdDog device pairing

- Branding
- Activity Log
- "View as user" (impersonation)

Admin-only features:

- Parking Lottery (create cycles, run draws, manage results)
- Void tickets and handle appeals
- Campus Alerts
- Permit type configuration
- Enforcement settings and violation types
- Finance (Stripe transactions, refunds, GL export, bursar import)
- Messaging templates
- Feature flags
- Backups and data management

If you need access to an admin-only feature, contact your supervisor or IT to have your Okta group updated.

Navigation

The top navigation bar provides access to all sections of Quarry:

- **Dashboard** -- the home screen described above.
- **Permits** -- manage permits, permit types, the lottery, RA/ABSN rosters, vouchers, guest registrations, and live capacity.
- **Lots** -- manage parking lots, draw map boundaries, configure zones, and handle closures.
- **Calendar** -- operations calendar showing lot closures and academic seasons.
- **Tickets** -- review citations, handle appeals, manage violation types, and configure enforcement settings.
- **Finance** -- Stripe transactions, revenue analytics, refunds, GL export, and bursar import. *(Admin only)*
- **Alerts** -- send campus alerts, manage subscribers, configure delivery channels. *(Admin only)*
- **Settings** -- messaging templates, branding, feature toggles, activity log, and data management.

Your email and role are displayed in the upper right. The dropdown menu provides quick links to the Visitor Portal, your own permit (My Permit), impersonation, and sign out.

2. Permits

Quarry is a self-service parking system. Students, faculty, staff, visitors, long-term contractors, and student guests can all obtain their own permits online at parking.moravian.edu. Your role as staff is to manage, troubleshoot, and oversee permits after they are created -- not to issue them by hand. Manual permit creation exists as a capability but should be a last resort, not a default workflow.

Viewing and Searching Permits

The Permits page shows a paginated table of all permits in the system (50 per page). Use the search bar to find permits by name, email, license plate, or student ID. Filter by status (Active, Expired, Revoked, Suspended) and permit type using the dropdown filters above the table. Click any column header to sort.

A duplicate plate warning banner appears when the system detects the same license plate on multiple active permits. Click the banner to see which permits are affected.

Creating a Permit Manually

Manual creation is a last resort. In nearly all cases, the person should self-serve at parking.moravian.edu. Use this only when someone genuinely cannot complete the process themselves (system error, special accommodation, etc.).

If manual creation is necessary:

- 1 Click Create Permit**
The button is in the top right of the Permits page.
- 2 Fill in student details**
Enter the student's name, email address, student ID, phone number, and license plate(s).
- 3 Select permit type and lot**
Choose the permit type from the dropdown (price is shown). Select one or more lot assignments.
- 4 Set dates and status**
Set the valid-from and valid-to dates. Status defaults to "Active."
- 5 Apply fee waiver or voucher (optional)**
Toggle the fee waiver switch for a free permit, or enter a voucher code to apply a discount.
- 6 Save**
Click Save. If payment is required, the system creates a Stripe checkout session and emails the student a payment link.

Note: For permits that require payment, the permit is created in a pending state until the student completes payment through Stripe.

Editing a Permit

Click any permit row to open it, then click Edit. You can change the student's name, plates, lot assignment, permit type, status, and valid dates. Changes are logged in the Activity Log automatically.

If you change the permit type, the system automatically updates the lot assignments to match the new type and handles the financial difference. If the new type costs more, the student receives a payment link for the difference. If it costs less, a refund is issued automatically through Stripe.

Operators also have the flexibility to add any lot to any individual permit, regardless of what the permit type normally allows. This lets you accommodate special cases (temporary relocations, ADA accommodations, department arrangements, etc.) without needing to create a new permit type.

Self-Service Vehicle Updates

Students and employees can update the license plate on their own permit without contacting the parking office. From their permit or lottery acceptance card at parking.moravian.edu, they click Update Vehicle, enter the new plate and state, and submit. The change takes effect immediately.

There is a 7-day cooldown between plate changes to prevent abuse. The system also blocks a plate that is already registered on another active permit. If a student contacts the office saying they cannot update their plate, check whether they are still within the cooldown window or whether the plate is already in use elsewhere.

Housing Classification and Eligibility

The system queries Moravian's Jenzabar SIS for each student's housing classification: Resident (R) or Commuter (C). Students are automatically routed to the correct permit options based on this classification. A resident cannot purchase a commuter permit and vice versa. The housing classification badge is displayed from university records and cannot be overridden by the student.

If a student reports seeing the wrong permit options, verify their housing status in Jenzabar. The system pulls this data live from SIS, so a correction in Jenzabar takes effect immediately.

Cancelling a Permit

To cancel a permit, open the permit detail and click Cancel. The system displays a cancellation preview showing:

- The permit's term window (start date, end date, days used, days remaining).
- The amount paid (pulled from the payment record or Stripe).
- A suggested prorated refund amount based on the remaining term.
- The next waitlisted student for this permit type, if any.

Choose a cancellation reason (withdrawal, transfer off campus, issued in error, or other) and add optional notes. Select a refund mode: full refund, prorated by week, prorated by day, prorated by semester, or a custom amount. The system issues the Stripe refund automatically.

When a permit is cancelled and there are students on the waitlist for that permit type, the system automatically offers the vacated seat to the next person in line. If the permit type has reserved spots configured (for admin discretionary assignment), the freed spot goes back to the reserve pool instead of advancing the waitlist.

Note: *Permits cannot be deleted outright. Cancellation is the only way to remove an active permit. This preserves the full audit trail of every permit that was ever issued.*

Bulk Operations

Select multiple permits using the checkboxes on the left side of the table. A toolbar appears with bulk actions: Revoke, Expire, Suspend, or Reactivate. You can also export the current filtered list to CSV using the Export button.

Permit Reassignment

To change a student's permit type (e.g., upgrading from North Guaranteed to North Premium): open the permit detail, click Reassign, select the new type. The system shows a financial preview with the price difference before you confirm. If the new type costs more, a payment link is sent to the student.

Permit Detail View

Click any permit to open its detail page. The header shows all key information about the permit holder. Five tabs provide deeper views:

- **Overview** -- summary with any duplicate plate warnings.
- **Tickets** -- all citations issued to this permit holder.
- **Payments** -- all payment transactions linked to this permit.
- **Timeline** -- full audit trail of every action taken on the permit, color-coded by type.
- **Related** -- prior and related permits for the same person.

Managing Permit Types

Admin only -- operators can view permit types but cannot create or modify them.

The Manage Permits tab (within the Permits page) lets you configure the types of permits your office offers. Each permit type defines:

- **Code and Label** -- internal code and display name (e.g., north_premium / North Premium).
- **Price** -- the Stripe charge amount.
- **Max Capacity** -- how many permits of this type can be active.
- **Reserved spots** -- a fixed count or percentage of capacity held back for admin discretionary assignment (e.g., special accommodations, late adds). Cancelled permits in types with reserves replenish the reserve pool before advancing the waitlist.
- **Valid days** -- how long the permit is valid after purchase.
- **Lot assignments** -- which lots this permit type can park in.
- **Class year restriction** -- minimum class year required.
- **Online purchasing** -- whether students can buy this type directly online.
- **Lottery required** -- whether this type is only available through the parking lottery.
- **Purchasing schedule** -- open and close dates for online purchasing.

Status badges on each permit type indicate its current state: Active, Inactive, Lottery Tier, Purchasing Closed, Always Available, or Admin-Issued.

The capacity display for each permit type shows total active vs. max capacity, public open spots, and reserved pool availability separately. Students only see the public pool; the reserve count is admin-facing only.

A 'Local Resident' permit type (\$0) is available for neighborhood residents who need a parking permit. It is operator-issued only -- it does not appear in student self-service.

Live Capacity Monitor

The Live tab shows real-time capacity for every permit type. Progress bars are color-coded: green when plenty of spots remain, amber when nearing capacity, and red when at or over capacity. The page auto-refreshes every 10 seconds. A recent permits feed shows the latest issuances.

3. Parking Lottery

Admin only -- operators do not have access to lottery management.

The parking lottery allocates limited resident parking permits fairly using a seniority-based waterfall algorithm. Students apply during an application window, and the system ranks them by class year (seniors first), then by application timestamp within each class year. Each student ranks their permit type preferences, and the algorithm places them into their highest-ranked available choice.

Creating a Lottery Cycle

From the Permits page, select the Lottery tab.

- 1 Click Create Cycle**
Enter a name for the cycle (e.g., 'Fall 2026 Resident Parking').
- 2 Configure tier associations**
The cycle automatically picks up permit types marked as 'Lottery Required.'
- 3 Set application window**
Choose the number of days the application window will be open (default: 3 days). The draw will run automatically after this window closes.

Important: Do not set the auto-draw threshold. The lottery should only close on a time condition, not when applications reach a certain count. A threshold trigger turns the lottery into first-come-first-served and defeats the seniority algorithm.

Opening the Application Window

Click Open Cycle. Students can now apply at parking.moravian.edu/parking. The system shows them eligible tiers based on their class year and housing status. They rank their preferences and submit. The application confirmation tells students that timing does not affect their chances and that the draw runs after the window closes.

Running the Draw

The draw runs automatically when the application window expires. You can also run it manually from the Lottery tab. The waterfall algorithm:

- Sorts all applicants by class year (descending), then by application timestamp.
- For each applicant, tries to place them in their first-choice tier.
- If that tier is full, tries their second choice, then third, and so on.
- If no preferences are available, the applicant is waitlisted on their first choice.
- Selected students receive an email with a payment link and a deadline to accept.

Note: After the draw, verify that no lottery tiers are open for direct purchase. The system checks this automatically and logs a critical warning if it detects the issue.

Managing Results (Desk View)

The Desk View is designed for handling student inquiries at the service counter. It shows all lottery results with filters for status (placed, accepted, waitlisted, etc.) and tier.

For each student, you can:

- **Case** -- open a detail drawer with their ranked preferences, what they received, and a plain-English explanation of the outcome. The summary can be copied to clipboard for pasting into emails.
- **Manual Select** -- manually assign a waitlisted student to a specific tier, with the option to force a capacity override.
- **Bump** -- move a waitlisted student to position 1 so they get the next available spot.
- **Restore** -- restore a superseded (duplicate) application back to the waitlist.
- **Resend** -- resend the offer notification email.
- **Upgrade** -- upgrade an accepted student to a higher-tier permit type (with payment link for the price difference).

Waitlist Management

As students decline offers or their acceptance deadlines expire, spots open up. Each tier has its own Expire and Promote controls, so you can advance the waitlist for one tier without affecting others. The queue view shows each student's position and can be filtered by tier and status independently.

Click Notify Waitlist to send all waitlisted students an email with their current position in the queue. You can also add students to the waitlist manually and optionally specify their position in the queue.

Buy Available Permits and Upgrade Waitlists

After the lottery draw, some permit types may still have availability. Waitlisted or accepted students can see and purchase these available permits directly, without waiting for a waitlist offer. Admins can also switch individual lottery tiers to direct purchase mode when demand has settled and the waitlist is no longer needed.

Students who purchased a commuter permit directly (bypassing the lottery) can also join upgrade waitlists for premium tiers. Their waitlist position is preserved if they purchase a permit in the meantime.

RA Roster and ABSN Discounts

The RA Roster tab manages Resident Advisors who receive a fee discount. Upload a CSV or Excel file of RAs, or add them individually. The system automatically matches RAs to their permit applications and applies the discount.

The Balance Due view shows RAs who owe additional payment (e.g., after upgrading). The Refund Due view shows those who overpaid and need a Stripe refund.

The ABSN Discount tab works similarly for accelerated nursing students, who receive a flat discount (default \$100). Upload the roster or add students individually.

Vouchers

Voucher codes provide discounts on permit purchases. Create codes in the Vouchers tab with a discount type (percentage, flat amount, or full waiver), applicable permit types, maximum uses, and optional expiration date.

Students enter the code during checkout.

4. Tickets and Enforcement

Reviewing Tickets

The Tickets page lists all parking citations with filters for status (Issued, Overdue, Pending Payment, Paid, Appealed, Escalated, Voided) and category (Parking, Moving). Use the search bar to find tickets by ticket number, license plate, or name.

Click any ticket to open its detail modal, which shows the violation photo, vehicle information, location, timestamps, and the issuing officer.

Handling Appeals

Admin only -- operators can view tickets but cannot approve appeals or void citations.

When a student submits an appeal, the ticket status changes to 'Appealed' and appears in the Needs Action count on the dashboard. To review:

- 1 Open the ticket**
The appeal notes and the student's contact information are displayed.
- 2 Review the appeal**
Consider the student's explanation and any attached evidence.
- 3 Decide**
Click Approve to void the ticket, or Deny with a reason. The student receives an email notification of the decision.

Voiding Tickets

To void a single ticket, open it and click Void. To void multiple tickets at once, select them using the checkboxes and click Bulk Void.

Mailing Guest Citation Notices

Guest vehicles (not registered students) cannot receive email notifications. The Mail Notices section shows pending guest citations that need physical mail notices. Print the formatted notices, then mark them as mailed.

Enforcement Settings

Admin only

The Enforcement tab (under Tickets) controls system-wide enforcement rules:

- **Payment due days** -- how many days a student has to pay before the ticket is overdue.
- **Appeal window days** -- how many days a student has to submit an appeal.
- **Escalation threshold** -- number of unpaid tickets before escalation.

- **Permit fine reduction** -- percentage discount for ticketed vehicles that have a valid permit.
- **Academic year start** -- resets offense counts for escalating fines.
- **Toggles** -- unpaid-blocks-registration, towing enabled, snow emergency active.

Managing Violation Types

Violation types define what officers can cite for. Each type has a code, label, category (parking or moving), and escalating fine amounts (1st offense, 2nd offense, 3rd+ offense). Set any fine to \$0 to make that offense level a warning.

BirdDog Device Management

BirdDog is the iPad enforcement app used by parking officers in the field. From the Enforcement Devices tab:

- **Register a device** -- enter a name and scan the generated QR code with the BirdDog app.
- **Re-pair a device** -- click Pair on any existing device row to display the QR code again. Use this when setting up a replacement phone without needing to create a new device entry.
- **View devices** -- see all registered devices and when they last synced.
- **Revoke access** -- disable a lost or decommissioned device.

5. Lots and Parking Map

Viewing and Creating Lots

The Lots page shows a split-panel view: a filterable lot list on the left and a Google Maps satellite view on the right. Filter by campus (North, South, Remote) and type (Lots, Streets, External).

Creating and deleting lots is admin-only. Operators can view and edit existing lot details.

To create a new lot:

- 1 Click Add Lot**
Enter the lot name, type (lot, street, or external), campus designation, and designation code.
- 2 Set capacity**
Enter total spaces and handicap spaces. Toggle snow lot and SheepDog monitoring if applicable.
- 3 Draw the boundary**
Use the polygon drawing tool on the map to outline the lot's boundaries.
- 4 Save**
The lot appears on the parking map and is available for permit type assignments.

Map Boundary Drawing

The map uses Google Maps satellite imagery. Click the polygon tool to start drawing a lot boundary. Click to place each vertex, then close the polygon by clicking the first vertex. You can edit boundaries later by dragging the vertices.

These boundaries are not just cosmetic. Each vertex you place defines a GPS coordinate, and the resulting polygon is transmitted to BirdDog, the vehicle-mounted enforcement app. BirdDog uses these coordinates to know exactly which lot the enforcement vehicle is in at any given moment. Combined with time-of-day rules, this means a student vehicle parked in a faculty/staff lot during daytime hours is automatically flagged for citation, even if that same student is allowed to park there after 4:00 PM. Accurate boundaries are critical to enforcement working correctly.

Important: If a lot boundary is drawn incorrectly or is missing, BirdDog cannot determine which lot it is scanning and enforcement will not work for that lot. Always verify boundaries after creating or editing a lot.

Zones

Zones define special areas within a lot. Zone types include: disability, fire lane, visitor, admissions visitor, loading, EV charging, and reserved tenant. Each zone has a space count, optional fine override, and premium flag. Zones are enforced by BirdDog.

Lot Closures

There are two ways to close a lot:

- **Immediate closure** -- from the Lots page, click Close on any lot. Enter a reason, optional reopen time, and notification preferences. Affected permit holders are notified via their preferred channels.
- **Scheduled closure** -- from the Operations Calendar, create a closure event for a future date range. Notifications are sent when the closure begins.

To reopen a lot early, click Reopen from the Lots page.

Operations Calendar

The Calendar page shows a monthly view of lot closures (color-coded by status), academic seasons, and lottery events. Click any date to schedule a new closure. Click an existing event to edit or cancel it.

The Academic Calendar section lets you define academic seasons (Fall, Spring, Summer, etc.) with start and end dates. These are used for permit validity and enforcement rules.

6. Campus Alerts

Admin only -- operators do not have access to the alert system.

Quarry's alert system replaces the previous emergency notification platform. It supports 10 delivery channels: SMS, Email, Voice (TTS call), Digital Signage, Website Banner, Microsoft Teams, Extron display panels, PA/Siren (Q-SYS), Zoom Phone Paging, and RSS feed.

Sending an Alert

- 1 Go to Alerts**
If an alert is currently active, you will see a banner at the top with a Clear button.
- 2 Choose a template or write custom**
Select a saved template to pre-fill the content, or write from scratch.
- 3 Set the category**
Emergency (red), Weather (amber), Campus Closing (blue), Parking (gray), or General (gray). The category determines the visual styling across all channels.
- 4 Write the content**
Enter the subject, email body, and SMS body (separate fields -- SMS should be shorter). The SMS field shows a character counter targeting 160 characters.
- 5 Select channels**
Check the delivery channels to use. You can send through any combination of the 10 channels.
- 6 Target groups (optional)**
Select subscriber groups to limit delivery (e.g., only North Campus residents). Leave blank to send to all subscribers.
- 7 Configure response options (optional)**
Enable check-in mode (SAFE/HELP) to track acknowledgments.
- 8 Preview and send**
Click Preview to see how the alert will appear. Click Send to deliver immediately, or Schedule to deliver at a future time.

Important: Emergency alerts should be sent immediately, not scheduled. For weather and campus closing alerts, consider scheduling if you know about the event in advance.

Alert Templates

Templates save time during emergencies by pre-filling the subject, body, and channel selections. Create templates for common scenarios: active shooter, severe weather, campus power outage, lot closure, etc. Templates can be edited at send time.

Subscriber Management

The Subscribers tab shows everyone registered for alerts. You can add subscribers individually, import from CSV, or sync from the Jenzabar SIS. Each subscriber has an email, optional phone number, and SMS opt-in status. Export the subscriber list for reporting.

Groups and Targeting

Create subscriber groups by building, department, role, or any custom criteria. When sending an alert, you can target specific groups instead of all subscribers. This is useful for building-specific emergencies or department-level communications.

Alert Scenarios

Scenarios are multi-step alert sequences. For example, an escalation scenario might: (1) send an SMS alert, (2) wait 5 minutes, (3) send a voice call to non-responders. Create scenarios in the Scenarios tab and run them manually when needed. You can abort a running scenario at any time.

Response Tracking

After sending an alert with check-in enabled, the Response tab shows:

- **Response summary** -- total sent, acknowledged, and not yet responded.
- **Individual responses** -- each person's status (SAFE, HELP, no response).
- **Non-responders** -- list of people who haven't acknowledged, with a Resend button.
- **After-action report** -- a post-incident summary of delivery and response metrics.

Channel Configuration

The Channels tab shows the configuration status of each delivery channel. Each channel needs its own external service credentials (Twilio for SMS/Voice, SMTP for Email, webhook URL for Teams, etc.). Green indicates configured and working; red indicates misconfigured or missing credentials. Use the Test Console to verify each channel.

7. Finance

Admin only -- operators do not have access to financial data or transactions.

The Finance page connects to Stripe for payment processing and provides analytics on parking revenue.

Stripe Transactions

The Stripe Transactions tab shows live transaction data pulled from Stripe. Filter by type, permit type, status, search term, and date range. Expand any row to see full Stripe metadata. Select multiple transactions for bulk operations.

Revenue Overview

The Revenue tab provides a dashboard of financial metrics:

- Total fines assessed vs. collected vs. outstanding.
- Collection rate percentage.
- Citation revenue vs. permit revenue breakdown.
- Revenue by payment method (with card brand breakdown).
- Tickets by status distribution.
- Revenue timeline chart (daily or monthly granularity).

Refunds

Individual refunds: open any Stripe transaction and click Refund. Bulk refunds: select multiple transactions, click Bulk Refund, choose flat or percentage mode, review the preview (which shows eligible and skipped transactions), then confirm. A streaming progress bar shows execution status.

Department Chargebacks

The Department Chargebacks tab logs voucher usage: which code was used, by which student, for which permit type, and the discount amount. Export this as CSV to submit to departments for reimbursement.

Oracle GL Export

Export financial data in Oracle General Ledger journal format for reconciliation with the university's finance system. Set a date range and download.

Bursar Import

Import a CSV from the bursar's office to reconcile institutional billing records with Quarry's payment data.

8. Settings

Messaging Templates

Admin only

The Messaging tab lets you create reusable message templates for lot closures, parking notices, and other communications. The email body uses a WYSIWYG rich text editor (no HTML knowledge needed). A separate SMS body field has a 160-character counter. Available placeholders: {lot_name}, {reason}, {closes_at}, {reopens_at}, {school}, {department}.

To send a message: select a template, choose target lots, customize the content if needed, select email and/or SMS channels, add extra recipients, and preview with live recipient counts before sending.

The Notification Preferences viewer shows all permit holders' SMS opt-in/out status, filterable by lot.

Branding

Customize Quarry's appearance for your institution:

- **Logo** -- upload a PNG, SVG, or WebP to display in the navigation bar.
- **Favicon** -- the browser tab icon.
- **Brand identity** -- product name, department name, primary color, and accent color.
- **Presets** -- save and load brand configurations for quick switching.
- **Live preview** -- see changes reflected in the nav bar before saving.

Feature Toggles

Admin only

Enable or disable optional modules. Currently: the Vouchers module can be toggled on or off. When disabled, the Vouchers tab is hidden from the Permits page.

Activity Log

A complete audit trail of every action in the system. Filter by user email, resource type (tickets, permits, lots, payments, auth, etc.), and action type (create, update, delete, login, etc.). Expand any row to see the old and new values for each change.

The 'Payment Started' quick filter is useful for investigating incomplete transactions where a student started checkout but didn't finish.

Backups and Data Management

Admin only

The Data Management tab provides:

- **Export Backup** -- download the entire Quarry database as a JSON file.
- **Restore from Backup** -- upload a previously exported backup to restore the database.

- **SMTP Test** -- verify that email delivery is working.
- **SIS Test** -- verify the connection to the Jenzabar Student Information System.
- **Scheduled Backups** -- configure daily/weekly/monthly automated backups with optional Google Drive upload.
- **Run Backup Now** -- trigger an immediate backup.
- **Backup History** -- view, download, or delete past backups.

Important: The *Clear All Permits* and *Clear All Tickets* options permanently delete records and are restricted to specifically authorized administrator accounts. Use with extreme caution.

9. Employee Parking

Faculty and staff purchase permits at parking.moravian.edu/employee-parking. This is a self-service page separate from the student lottery flow. Employees see only the permit types available to them (typically Faculty/Staff permits), enter their vehicle information, and pay through Stripe.

From the admin panel, employee permits appear in the regular Permits list with a 'faculty_staff' permit type. Manage them the same way as student permits.

10. Visitor Parking

Visitor parking is managed at parking.moravian.edu/visitor. All visitor permits require a campus sponsor (the faculty or staff member responsible for the visitor). Visitors self-register their vehicle and the sponsor's name is recorded on the permit.

The Visitor Presets tab (under Permits) lets you create templates for recurring visitor scenarios: long-term contractors (e.g., Sodexo), admissions visitors, conference guests, etc. Each preset defines a default company name, sponsor, department, duration (multi-day, semester, or yearly), and permit type. When a visitor selects a preset, the form pre-fills with those defaults.

Overnight Guest Registration

Students can register overnight guest vehicles at parking.moravian.edu. When a guest is registered, the system automatically creates a temporary guest permit (type 'student_guest') with commuter lot access. Guest permits appear with a pink tag in the admin permits list and guest registrations view.

Students must provide their guest's license plate when registering. The guest registration card shows which lots the guest can park in, with parking hours noted (some lots are after-hours only, e.g., after 4 PM and weekends). A campus map with north/south toggle highlights authorized lots.

11. Impersonation and Troubleshooting

When a student contacts the office with an issue, you can view the application exactly as they see it using the impersonation feature.

1 Open the user menu

Click your email/name in the top right corner of the admin panel.

2 Enter the student's email

In the 'View as user' field, type the student's Moravian email address.

3 Click Go

The application reloads showing exactly what that student sees: their permits, lottery status, available parking options, and pricing (including any discounts).

Impersonation is logged in the Activity Log. To return to the admin view, sign out and sign back in.

Common Troubleshooting Scenarios

- **"I applied but didn't get placed"** -- use the Lottery Desk View to look up the student. The Case detail shows their preferences, what happened, and a copyable explanation.
- **"I paid but don't see my permit"** -- check the Activity Log for "Payment Started" events. The payment may have succeeded in Stripe but the permit creation may have failed. Check Stripe Transactions in Finance to verify payment status.
- **"I'm seeing the wrong permit options"** -- the system uses the student's housing classification from Jenzabar SIS (Resident vs. Commuter) to filter eligible permits. If it's wrong, the fix is in Jenzabar, not in Quarry.
- **"I can't find the parking page"** -- students access permits at parking.moravian.edu/parking. Employee parking is at parking.moravian.edu/employee-parking.
- **"I can't update my license plate"** -- the system enforces a 7-day cooldown between plate changes. Check when their last change was. Also verify the new plate isn't already on another active permit.
- **"My fine seems wrong"** -- check Enforcement Settings for escalation rules. The fine may be a 2nd or 3rd offense amount. Check the student's ticket history for prior offenses in the current academic year.
- **"I didn't get the notification"** -- check the student's notification preferences (Messaging tab in Settings) to verify opt-in status. Check the Activity Log for the specific send event.

For technical support or system issues, contact IT at ext. 7753 or brandesd@moravian.edu.
